Location of count: _____

_____

Date: _____, Temp. _____

Time: Begin _____ End _____

Weather _____

Habitat Type _____

Feeders/Baths _____

_____

Feeders/baths (types) _____

_____

Procedures for Count: Select a circular area on the ground (may include water area), 15 feet in diameter, to include feeders, bird baths, shrubs, etc., as you wish. Imagine the circle extending upward as a cylinder. Count the numbers of individual birds of each species which come into this circle (or cylinder) during exactly ONE HOUR. Try to judge as best you can the actual number of individuals which are making visits to the Circle, or which fly through imaginary cylinder. Try NOT to count the same individual bird over and over again! Please print "In Circle" column. If you wish to report any seen outside the Circle, list them in the "Outside" column.

Pick any ONE-HOUR period during the day and make the count on Thanksgiving Day!!! Please send your results (even if you see no birds at all) to:

Dr. John G. Hewston
Natural Resources Building
Humboldt State University
Arcata, CA 95521

Record your observations on the field form below:

Species name	In Circle	Outside
Common Loon		
Mallard		
Barrow's Goldeneye
