

# 2004 JUNEAU CHRISTMAS BIRD COUNT RESULTS

by Mark Schwan

Juneau's Christmas Bird Count was held on Saturday, December 18. Forty volunteers braved the mild but very wet day to participate in the 32<sup>nd</sup> Christmas count in Juneau. Seventy-one species and a record high 14,210 birds were seen during the day.

The 23 common species seen on all previous 31 counts were seen again; these include mostly waterfowl that over-winter here, along with our most familiar resident species. New high counts were obtained for seven species (numbers in boldface in table): Canada Goose, Green-winged Teal, Gadwall, Lesser Scaup, Northwestern Crow, Dark-eyed Junco, and Pine Siskin. A Harris's Sparrow was seen the day before the count, so it can be included as a count week (cw) species. It has been 10 years since the last Harris's Sparrow was present during a Juneau Christmas Count. There were no exceptionally rare species found on count day, but owing to the open water at Twin Lakes and the marsh adjacent to the Pioneer's Home, several species were still lingering that are rarely seen during our local count. These included Northern Shoveler, Ring-necked Duck, and American Coot. There were six additional species located during our count week put the count week total at 77 species.

The CBC results will be viewable at: <http://www.audubon.org/bird/cbc/> once they are entered online. Anyone with an internet connect can view all the current and historical counts. The database is becoming very impressive.

Thanks to all the volunteers that gave their day to the count, the group leaders for their efforts, and to Gus van Vliet for conducting the tally at the potluck and keeping track of count week birds.

Pacific Loon	1	Glaucous-winged Gull	2,632
Common Loon	2	Gl.-winged x Herring hyb.	2
Yellow-billed Loon	<i>cw</i>	Unidentified Gulls	77
Horned Grebe	31	Common Murre	8
Red-necked Grebe	20	Pigeon Guillemot	3
Pelagic Cormorant	9	Marbled Murrelet	64
